

FRONTEND COURSE FINAL PROPOSAL

RoamWise

THE EDITORIAL BUDGET-REVERSE TRIP PLANNER

PART 01

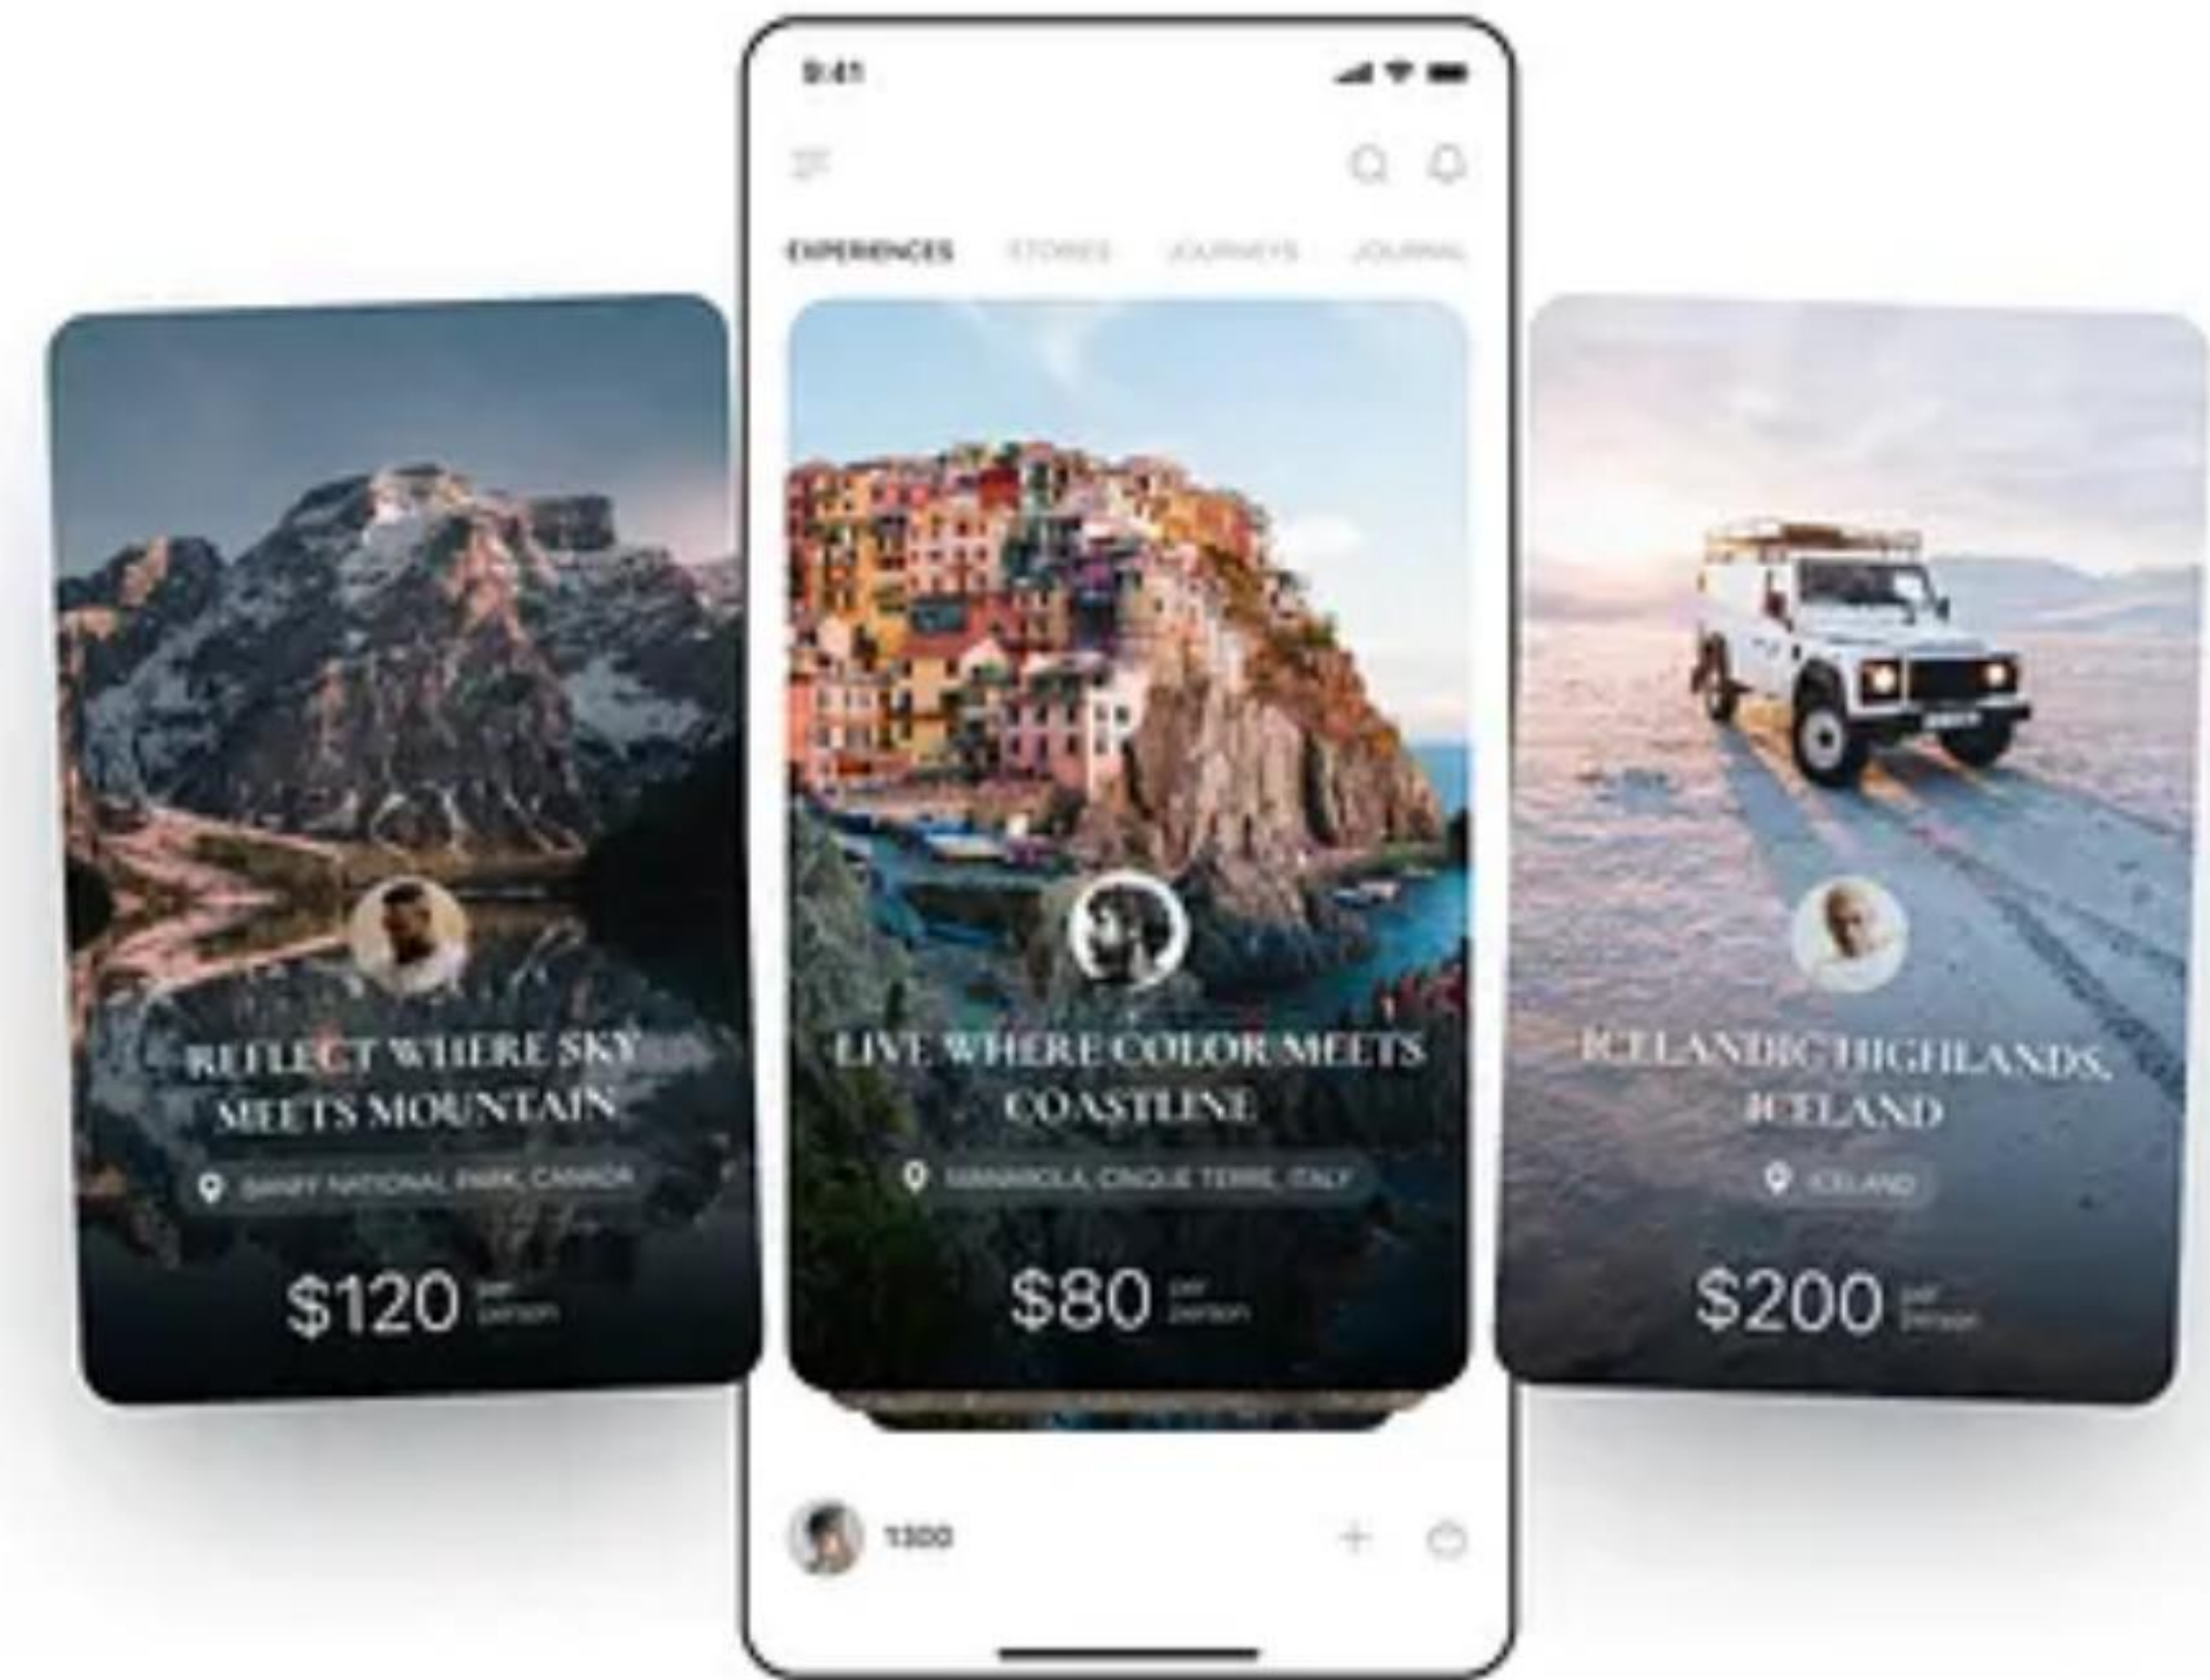

Design Inspiration

Editorial Aesthetics

A Departure from Chaos

Traditional travel booking platforms overwhelm users with endless filters, visual noise, and transactional layouts.

RoamWise borrows design languages from premium adventure platforms like **Much Better Adventures** and elite national tourism boards. We implement high-impact organic photography, robust grid hierarchies, and beautiful serif-based typography to craft a sense of exploration before the journey even begins.

Brand Identity & Concept

The Name: RoamWise

"Roam" represents the limitless spirit of travel, exploration, and editorial wanderlust. "Wise" grounds the project in pragmatic logic: intelligent budget mapping, real-time data calculations, and elegant functional components.

Logo & Visual Tone

A minimal vector-based compass nested within an architectural vault. Built with hand-crafted SVG code, styled in our custom primary colorway: Warm Sand Base (#F4F0EB), Editorial Deep Navy (#0F1A2C), and Terracotta Accent (#C96A53).

Solving Real Travel Pain Points

84%

TRAVELERS OVERBUDGET

Budget-First Discoverability

Traditional sites require choosing a location first. But current travelers usually face a rigid spending constraint (e.g., "\$5,000 max").

RoamWise flips this paradigm completely. By sliding your target budget cap, the frontend dynamically curates full itineraries—accommodations, flights, activities—that mathematically fit.

PART 02

Component Mindset

What is a Component Mindset?

Modular Legos

We stop viewing pages as huge monolithic files. Every interface element—from a card to a slider—is designed as an isolated, reusable "Lego block" with strict boundaries.

State Isolation

Each component manages its own behavior. The budget slider doesn't care about page-wide layouts; it simply broadcasts state updates, allowing easy debugging.

Future Scalability

Designing components independently prepares us for advanced reactive libraries (like React or Vue) while ensuring our current vanilla JS codebase remains modular.

Component Construction Roadmap

Global Layout

Setting up baseline editorial grid templates, global color schemes, typography, and responsive shells.

Control UI

Coding custom slide-bars, tactile range sliders, and active filter toggles with native JS callbacks.

Display Grid

Constructing uniform visual cards to render destinations, packing details, and weather overlays.

Modal Details

Implementing seamless overlay modals with smooth transition events to render custom travel plans.

The Budget Split Algorithm

No AI Needed: Smart Proportional Splitting

Instead of sending heavy requests to costly external language models, our site calculates travel allocations via client-side logical formulas.

Total budget values are programmatically routed into standard travel pillars using a reliable baseline proportion:

$$P_{\text{Total}} = C_{\text{Transit}} + (C_{\text{Hotel}} \times n) + (C_{\text{Daily}} \times d)$$

Where Transit (flights) occupies 40%, Hotel occupies 30%, and Daily Allowance takes up the remaining 30%.

Comparative Landscape

CORE METRICS	TRADITIONAL AGGREGATORS	ROAMWISE EXPERIENCE
Starting Pivot	Location & Specific Dates first	Financial Budget Boundaries first
Visual Philosophy	High-density grids, aggressive flash deals	Editorial whitespace, curated imagery
Dynamic Logic	Purely server-side sorting filters	Instant client-side proportional splitting
User Flow	Fragmented planning on spreadsheets	Unified "One-Cap" itinerary discovery

Editorial Journey Aesthetics

Active Escapes

High-altitude trekking paths and natural scenery packages.

Quiet Retreats

Bespoke cozy wood cabin selections and hidden forest spots.

Scenic Trails

Wanderlust-focused itineraries combining hiking with coastal routes.

Ready to Roam?

Let's build a pristine, responsive user interface without clutter.

Tech Stack: TailwindCSS + HTML5 + CSS Grid + Vanilla JS Modules
